- * **FLOORING:** Epoxy floor coatings, Acid resistant screeds
- * **CONCRETE REPAIRS:** Spalling & Structural repairs
- Eroded / corroded concrete rehabilitation
- * **INDUSTRIAL CORROSION CONTROL:**
- Application of anti corrosion coating systems
- Grit blasting and painting to specifications

IMPERIAL'S Goscor Lift Truck Company has sold the world's 9,000th Bendi articulated fork lift truck, which recently rolled off the Translift production line in Redditch, U.K. The truck, a Bendi AC B420, was part of an order delivered to wholesale giant, Makro.

As well as selling the 9000th Bendi, Goscor recently sold its own 100th Bendi machine, also a B420 with a 7,2m lift height, to the Bearing Man Group.

Bearing Man Group and supply chain Projects Manager Vasu Govindsamy says that he is extremely pleased with the product. "The Bendi machine is outstanding quality and its ability to work in narrow aisles is helping us to optimise our warehouse space. Also, the service and enthusiasm of the Goscor team has made it a pleasure to deal with them," says Govindsamy.

He adds that the pressure on the Bearing Man supply chain facility is enormous and any downtime is obviously very costly. "Using Bendi and Goscor helps us to reduce downtime to an absolute minimum and, in the event that something does go wrong, the Goscor team is there for us 24/7," he says.

Goscor Lift Truck Company MD, Darryl

The 9,000th Bendi articulated fork lift truck was part of an order delivered to wholesale giant Makro

Shafto, said he is not surprised by the exceptional success of Bendi. "Their quality and service is on par with anything in the world and, as Bendi machines are so efficient in very narrow aisle (VNA) applica-

tions and there is such a premium on saving warehouse space in these demanding economic times, they have found a niche in which they can excel," says Shafto.

New thermal imagers on the market

FLUKE, represented locally by the Comtest Group, has introduced two new thermal imagers, the Ti105 and TiR105, specifically designed for use by maintenance professionals.

The Ti105 and TiR105 find application in industrial (manufacturing, process, petrochemical, etc.), plants, commercial buildings and facilities, government buildings, schools, hospitals, electrical, water and natural gas utilities, and residential dwellings.

Fluke's newest extended imagers help users do more in less time, even within the barefoot of service

One of the two new thermal imagers which Fluke has introduced on the

patented its technology that blends digital and infrared images into a single image to precisely document problem areas

Multi-mode video recording – Troubleshooting is made simple with the industry's only thermal imager that records focus-free video in visible light and infrared with full IR-Fusion capabilities. It monitors processes over time, and creates infrared video reports, trouble-shooting frame-by-frame. Downloadable to PC for video viewing and analysis

IR-PhotoNotes annotation system
